CERTIFICATIONS

AWS Certified Cloud Practitioner
Amazon Web Services · 2026

Microsoft Azure Fundamentals (AZ-900)
In progress · prelim passed

EDUCATION

Diploma in Software Engineering (NQF 6)
CTU Training Solutions
2026 – 2027 · part-time
Upcoming in 2027: C#, software testing, mathematics

National Senior Certificate
Hoërskool Stellenberg · 2024
IT, Engineering Graphics & Design, Maths, Physical Sciences

TECH STACK

Languages
Java, Python, JavaScript, HTML/CSS, Delphi

Frameworks
Spring Boot, Django, React, React Native, Tailwind, WordPress

Data & cloud
PostgreSQL, Docker, AWS, Azure, DNS

Ways of working
Spec-driven development (with or without AI tools), harness engineering, REST APIs (Spring Boot, Django), Git, Figma, Planner/Trello

Junior Software Engineer

Kobus van Schalkwyk

I'm a junior software engineer who delivers working software. I build client websites full-time at Teclogix, lead an internal Kotlin app build there, and run a small dev studio that launched a live React site for a startup client. I am also building a budgeting app. I'm a AWS Certified Cloud Practitioner, studying toward a Software Engineering diploma, and I am the happiest when turning inefficient processes into reliable software.

Why hire me

01

I take initiative

As an intern at WEG, I spotted a better returns system, pitched a demo to the whole branch and got the go-ahead to build it. (This is only one example)

02

I build real products

I built and launched brighthire.net with OrbTechs team, a live React site for a real client, and I'm building a full-stack budgeting app on Spring Boot, PostgreSQL and React Native.

03

I learn fast

This year I earned my AWS certification, passed my AZ-900 prelim (International Exam scheduled for 11 November), and learned Spring Boot and React, all while working full-time.

Experience

Junior Web Developer · Teclogix

Mar 2026 – now

- I lead development of an internal Kotlin app, working directly with the company owner, using spec-driven development and harness engineering.
- I build and customise client websites in WordPress with the team, writing custom code where themes fall short.
- I introduced Microsoft Planner and Figma to the team, and both are now part of the daily workflow.
- I set up and manage client DNS records and design assets in Illustrator, Figma and Canva.
- I communicate directly with clients, from first brief through to launch.

Owner · OrbTech

Apr 2026 – now

After-hours dev studio that runs IT for a startup client and builds its own SaaS products

- I helped build and launch brighthire.net in React for our client Brighthire in about a week, working after hours.
- We run Brighthire's IT, including hosting, DNS and SSL.

LEADERSHIP

Tygerberg Gesinskerk, since 2019

Youth band leader · 2021 – 2025
I recruited and led the band, led on vocals and rhythm guitar, and ran the sound system.

Barista team leader · 2022 – now
I recruit, train and manage baristas, and built the system we use to serve coffee at services and events.

Sunday school leader · 2019 – 2025
I managed a team running weekly sessions for children.

LANGUAGES

English, home language

Afrikaans, home language

OTHER TRAINING

WEG motor and VSD training (2025)

First Aid Level 1 (2022)

Python course, Shaw Academy (2021)

BEYOND CODE

Guitar, piano and vocals

3D printing physical fixes and prototypes

Specialty coffee

Projects

Budget Tracker · OrbTech — In progress

React Native · TypeScript · Expo · Spring Boot · PostgreSQL

A mobile budgeting app built for simplicity: anyone, from a first-time earner to a pensioner, should be able to set up a budget in 5–10 minutes. Version 1 runs fully offline, with monthly category budgets, income and expense logging, and JSON export. I also built a Spring Boot REST API (JPA, validation, global error handling, Basic Auth) that will become its online backend. I work from requirements and technical specs, in milestones, with a beta planned for Google Play and the App Store.

WEG Returns System — 2025

Django · Tailwind · PostgreSQL · Docker

During my internship I saw a chance to replace WEG Cape Town's entire returns registry. I built a demo and pitched it to the whole team, then built the full system with two senior developers once it was approved. The repo is private, but I can give a demo on request.

VSI Sales — GitHub

Python · Django · PostgreSQL

A sales management app for small businesses. Users sign in, join a company on a subscription plan, and manage products, clients, orders and invoices.

Smart Assistant — GitHub

Python · ElevenLabs API · Spotify

A voice assistant for my own desktop. It does speech-to-text and text-to-speech, plays Spotify playlists, opens programs, files and websites, and reads out the weather.

Earlier experience

In my 2025 gap year I improved my Maths and Physical Sciences results while working three hands-on roles. That year is where I found software engineering.

Technical & Warehouse Intern · WEG — Apr – Jul 2025

I tested and repaired variable speed drives, wrote client reports, and pitched and built the returns system above.

Coffee Roastery Intern · Terroir Coffee Roasters — Aug – Oct 2025

I handled sales, roasting, packaging and deliveries, and learnt first-hand how a small business runs.

Facilities Assistant Intern · Tygerberg Gesinskerk — Jan – Mar 2025

I managed the youth database, ran inventory and event logistics, and did general maintenance.
